

WHAT IS CLAIMED IS:

1. A method for generating and displaying a patient form, the method comprising:
 - retreiving an XML file from a computer-readable medium, said XML file detailing data and structure of said patient form;
 - processing said XML file by running of an XML-responsive application;
 - generating said patient form defined by said XML file; and
 - displaying said form on a display.
2. A method according to claim 1, wherein said computer-readable medium is random access memory.
3. A method according to claim 1, wherein said patient form is an interactive patient form.
4. Method according to claim 1, wherein said patient form is a real-time interactive patient form.
5. Method according to claim 1, wherein said patient form is a clinical trial form.
6. Method according to claim 5, wherein said clinical trial form is a screening form.
7. A method according to claim 5, wherein said clinical trial form is a post-randomization form.
8. A method according to claim 5, wherein said clinical trial form is a termination form.

9. A computer program product containing a software program for installation in a central computer system that is connected to a network, the software program comprising:
code for generating code for a patient form, said patient form defined by an XML file.
10. A computer program product according to claim 9, wherein said software program further comprises code for network deployment of said code for a patient form.
11. A computer program product according to claim 9 or 10, wherein said patient form is an interactive patient form.
12. A computer program product according to claim 9 or 10, wherein said patient form is a real-time interactive patient form.
13. A method according to claim 9 or 10, wherein said patient form is a clinical trial form.
14. A method according to claim 13, wherein said clinical trial form is a screen form.
15. A method according to claim 13, wherein said clinical trial form is a post randomization form.
16. A computer program product according to claim 13, wherein said clinical trial form is a termination form.
17. A computer program product comprising:
a software program comprising code for generating code for a patient form, said patient form defined by an XML file, said software program for installation in a central computer system that is connected to a network.

30

18. Computer program product according to claim 17, wherein said software program further comprises code for network deployment of code for a patient form.
